Specification

Since the application is based on a translation from a foreign language, it should be reviewed to ensure it conforms to current US standards.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claims are generally narrative and indefinite, failing to conform with current U.S. practice. They appear to be a literal translation into English from a foreign document and are replete with grammatical and idiomatic errors.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Thompson (US 4,312,612) in view of Nakanishi (US 5,509,182). Thompson discloses a nut comprising nut piece (4) with a blind bore (at 13), a flange (2), snap on hooks (6) secured to the nut piece and walls (5) extending from the flange to the nut piece. The

snap-on hooks being relaxed to be inserted into an aperture as well at their expansion by a screw to engage an opposite side of a component is claimed an intended use since the claims are directed to the plastic nut itself and Thompson would be capable of the intended use. However, it should be noted that Thompson may also be used in a similar manner (see: column 1, paragraph beginning line 30 and column 2, paragraph beginning line 35). Thompson does not disclose the walls including reductions in their thickness. Nakanishi teaches to provide reductions in the thickness of walls and disclose the reduction to be facing outwardly (at 5 in Fig. 1), inwardly (at 29 in Fig. 10) and both inwardly and outwardly (at 29 and 37 in Fig. 10). At the time the invention was made it would have been obvious for one of ordinary skill in the art to provide the walls of Thompson with reductions in the wall thickness to facilitate their bending as discussed in Nakanishi. The reduction in the wall thickness would further ensure the walls bend at to optimal locations for the best performance.

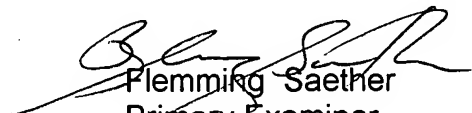

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
